

Medical Science and the Unborn (c)

Scientists believe that through stem cells they will be able to generate tissue for organ transplants, treat or cure disease, and produce new ways of testing drugs.

Problems they believe they will be able to treat through stem cell treatments.

Parkinson's Disease – Alzheimer's – Diabetes – Osteoarthritis – spinal cord injury – Rheumatoid Arthritis – Stroke – burns – heart disease.

Quote – “ Embryonic stem cell research smacks of a utilitarian ethic that places the greater good of society above the intrinsic value of the tiniest person, the human being at fertilisation.” Judie Brown

Discuss – If you had a child, parent or marriage partner who could be healed or saved of a terminal ill disease through the use of foetal or embryo tissue or research would you use it??? If so why? If not why?

Q. If a Christian came to you and wanted any of these treatments to have babies or to help their condition what advice would **YOU** give them?

Q. Where do you feel this will end up in the long run?

Q. Do you feel the church has already take steps down the slippery slop of compromising the unborn child in it's silence?
